

OVOPUR
ecodesign water filters

We can all agree that water is an essential part of our lives. It is part of our world, part of our bodies. Yet nothing in our daily routine suggests its importance. In our modern society, water is taken for granted or hidden away.

OVOPUR restores water to its central role in our lives. AQUAOVO pays tribute to water.

« Observe, Understand and Imitate Nature... »

AQUAOVO specializes in designing and distributing drinking water filtration and revitalization systems. It operates on the cutting edge to provide a water filtration experience that is inspired by nature and steeped in environmental awareness. Both a way of life and a health concept, the AQUAOVO experience lies at the crossroads of urban trends and collective well-being.

At the heart of this experience is OVOPUR, our revitalizing water filter. An offline gravitational filter solves the problem of drinking water quality in urban environments. Designed in Canada, OVOPUR is made from materials that fuse age-old traditions with tomorrow's trends. With its natural, innovative design and resolutely green approach, OVOPUR is a real breath of fresh air in the stuffy, gray world of water filtration units.

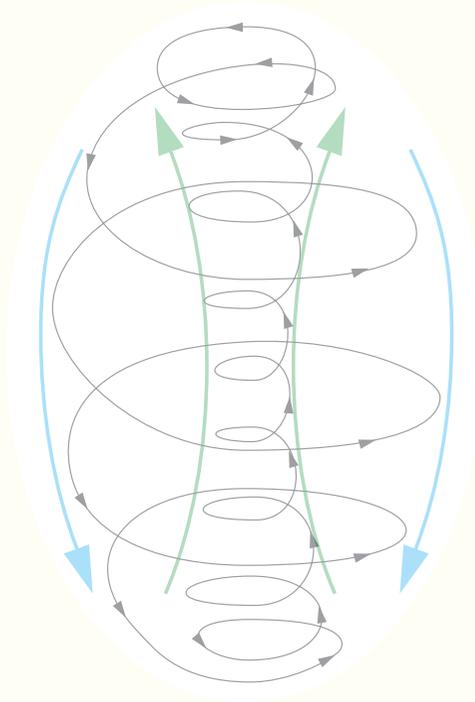

Natural by Design

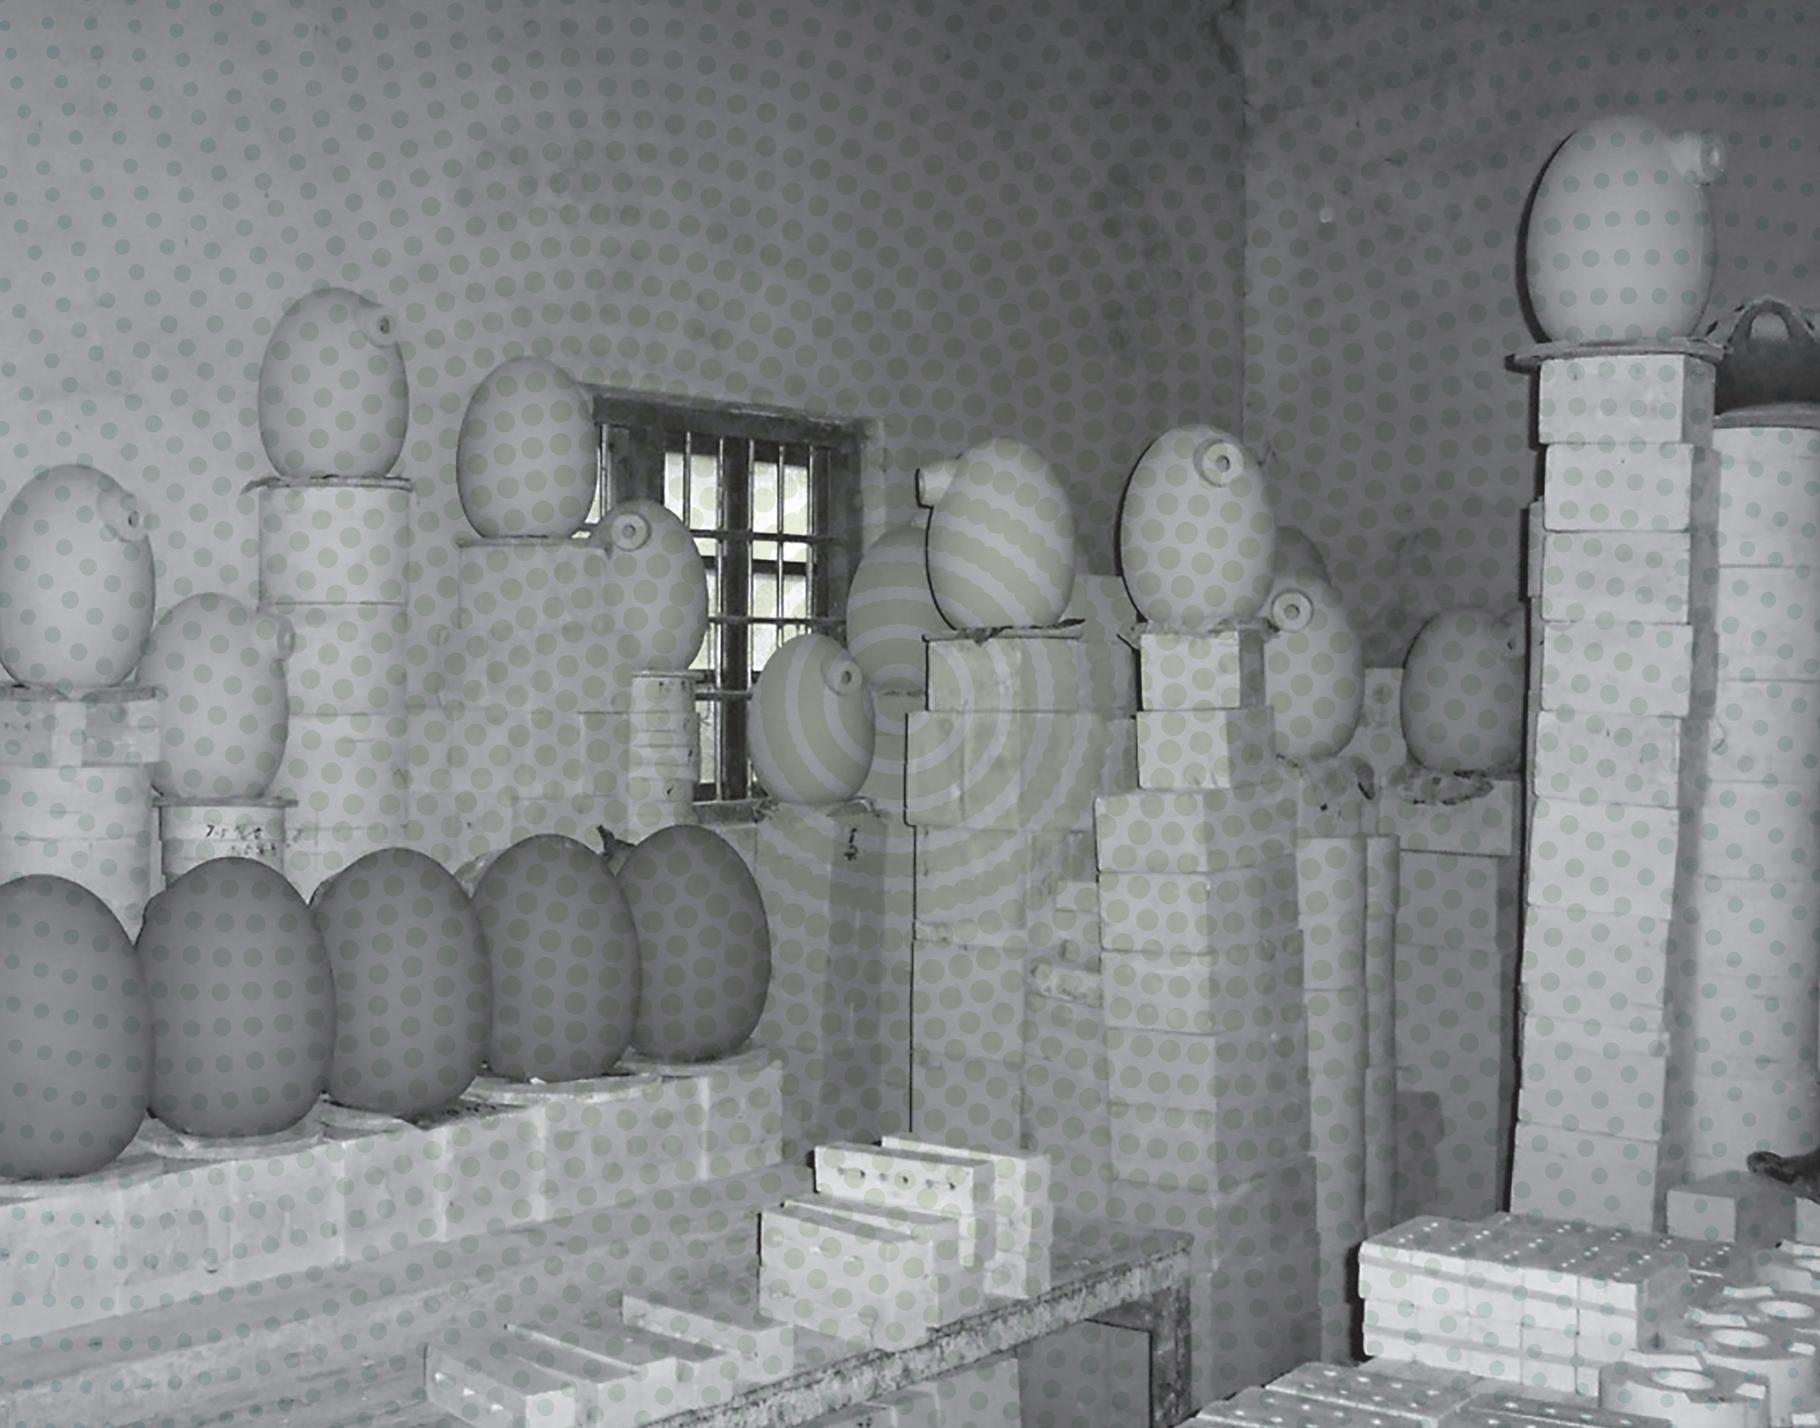

The unique shape of our water filtration unit did not result from sheer serendipity. Inspired by the work of water research pioneers, its shape eases the circulation and regeneration of water. Its overall look is one of abundance, purity, rebirth, and infinity. Its appealing curves and use of fine materials like porcelain, glass, and metal bear witness to our commitment to aesthetics and quality.

Flowing Water

The OVOPUR unit combines the unique shape of an egg and the thermal properties of porcelain to preserve and revitalize water. Its sleek curves and total absence of right angles allow water to flow freely and naturally. Temperature differences and regular usage flow induce a biotic movement that prevents stagnation, reduces the risk of bacteria buildup, and helps revitalize water.

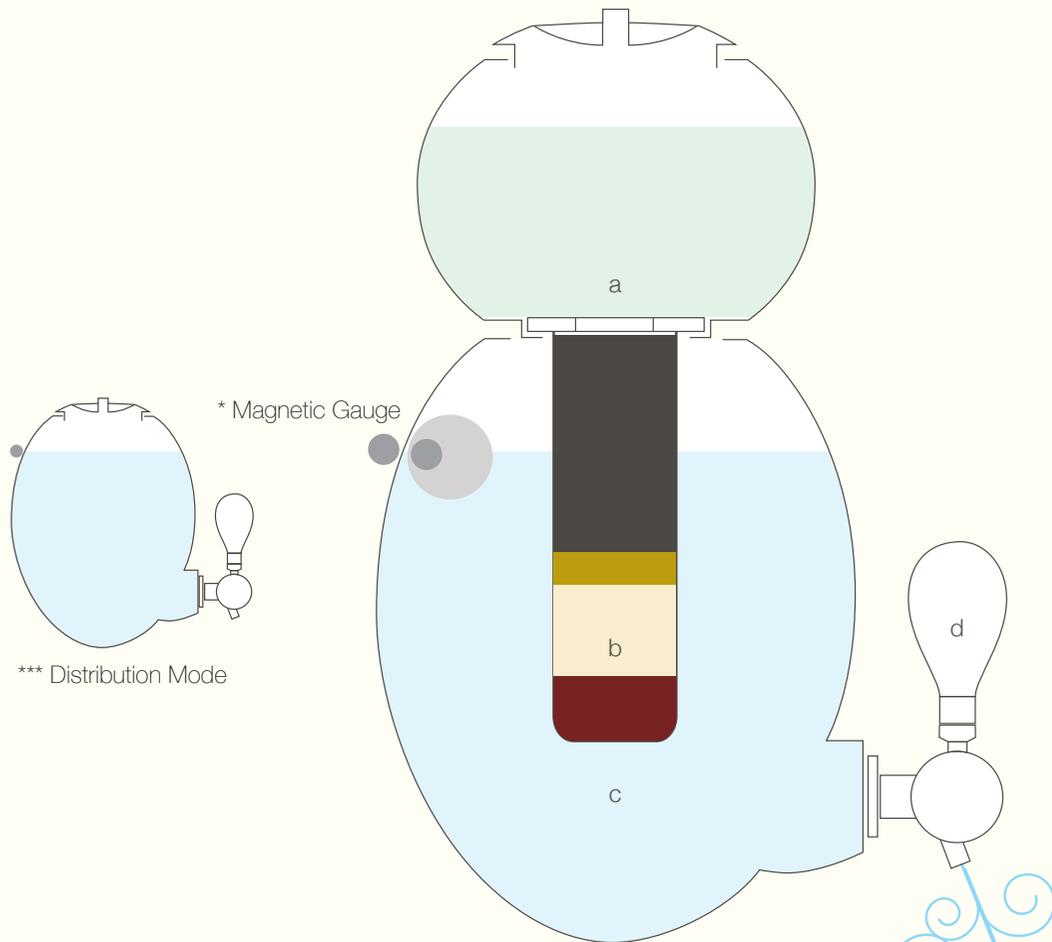

AQUAOVO looked for inspiration in nature and chose the life-giving egg shape to revitalize water.

Canadian Design, Age-Old Traditions.

Designed and raised in Montreal, Quebec, Canada, the OVOPUR filtration unit is made from materials that fuse age-old traditions with tomorrow's trends.

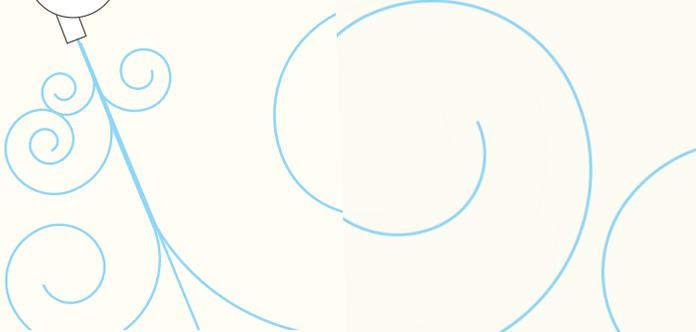

The products of the AQUAOVO experience are painstakingly handcrafted following age-old traditions and the renewable development guidelines. Our artisans are located in Canada, USA, Europe and Asia. They are all selected for their knowhow and respect of our ethical and fair trade values. Woodworkers, glassblowers, and ceramicists come together to create a perfect, functional piece of art set to become a valuable part of our daily life.

OVOPUR

How it Works.

Environmentally friendly to the core, the OVOPUR unit doesn't consume any electricity, using gravity instead to filter and revitalize tap water. Obtain crystal clear water in four easy steps:

- a) Use a jug or your sink faucet to fill the 4 liters upper filtration reservoir and start the filtration process
- b) Water trickles from the filtration reservoir into the main reservoir via the AQUACRISTAL filter cartridge
- c) The main reservoir can hold up to 11 liters of pure, fresh water, with the water level indicated by the magnetic gauge*
- d) Simply pull the handle and drink!

With its multipurpose lid, the OVOPUR unit can be used every day in filtration mode**, or in distribution mode*** for special occasions.

aquacristal

Designed to reproduce the basic filtration of the natural water cycle, our reusable, multi-layer filter cartridge contains tried and tested, first-class filtering materials that have been proven to remove chemicals and organic pollutants from drinking water.

Activated Carbon – Obtained by pyrolysis and controlled oxidation to make it more porous, activated carbon has enormous power of absorption. It is used to trap pollutants that may be present in water. Our activated carbon made from recycled coconut husks can absorb up to 99% of nonpolar, organic substances like mineral oils, volatile organic compounds (VOCs), aromatic polyhydrocarbons, phenols (chlorine), halogens (chloroform), and pharmaceutical residues. It is excellent for neutralizing water's taste and smell, effectively removes yeast and micropollutants, and absorbs traces of certain heavy metals. **Certified NSF 61**

KDF 55 – A powder made up of copper alloy and ultra pure zinc, KDF 55, through a powerful oxidation-reduction process can neutralize up to 99% of chlorine, lead, mercury, nickel, chromium, and other heavy metals that may be found in drinking water. Not only can it fight the buildup of bacteria, algae, fungi, and scale, but it's 100% recyclable. Plus it contains no chemical additives and meets the exacting standards of America's Environmental Protection Agency (EPA) and Food and Drug Administration (FDA). **Certified NSF 61**

Quartz Crystal – Quartz is the most common mineral on earth and the third most abundant element after oxygen and silicon. Used in watchmaking and computing, it is an excellent energy amplifier and conductor. Quartz crystal sand is used to remove any lingering impurities from the water.

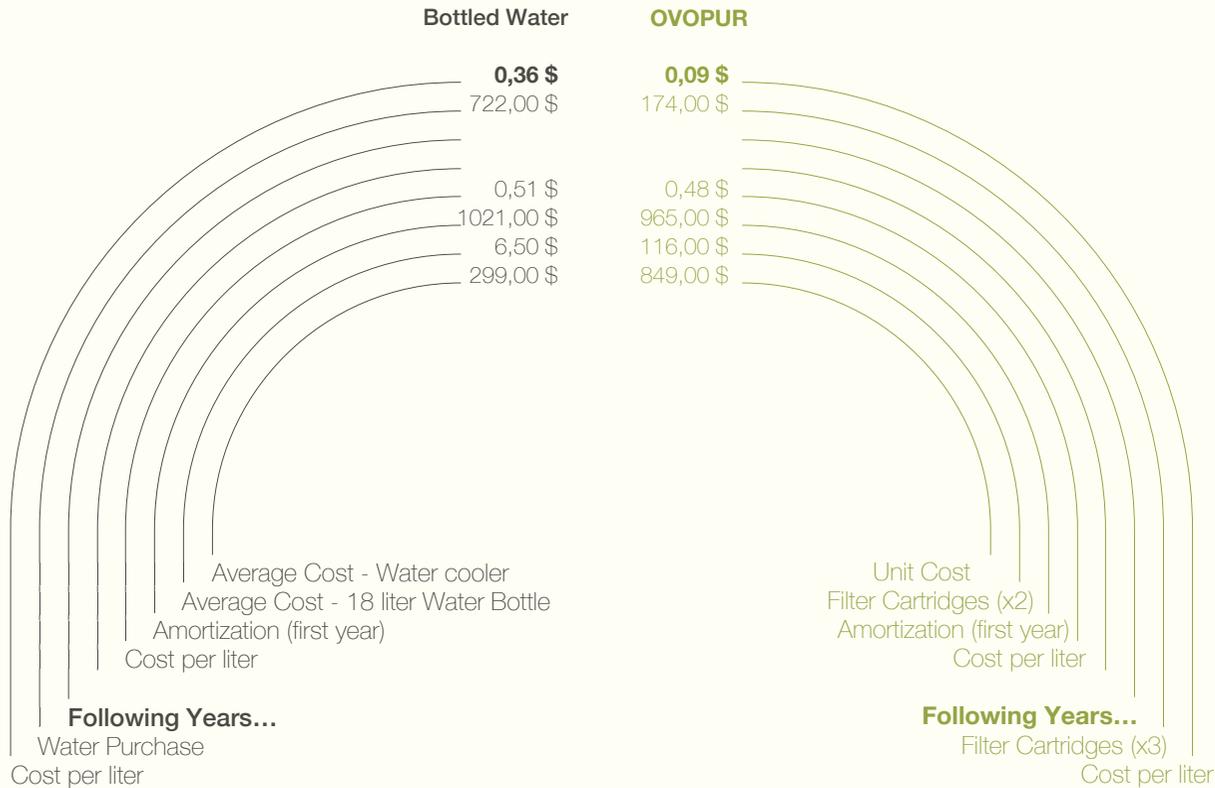

Microporous Bioceramics – Microporous bioceramic pellets are made using a mix of terracotta baked at temperatures of up to 1,300°C. This process creates a very porous surface (320 pores per square inch) and constant far infrared radiation. As well as absorbing chemical or organic residues that might be in the water, active bioceramics can soften and revitalize the water by reducing the size of its molecules. Far infrared radiation can reduce water's surface tension and ensure maximum hydration. It can also help stimulate blood circulation and detoxification while preventing oxidation.

Enjoy the advantages of the **OVO+ AUTO Annual Replacement Program** and its accidental breakage warranty!

Natural Technology.

At AQUAOVO, we study nature to understand and reproduce the perfection of age-old mechanisms that enable water to be constantly filtered and revitalized as part of the earth's ecosystem. We developed the AQUACRISTAL cartridge to reproduce the basic filtration process of the natural water cycle. The OVOPUR filter's unique shape and fine quality materials help protect and revitalize the water by preserving its natural flow.

Why try to improve on perfection?

The AQUAOVO experience brings you superior quality water at a fraction of the cost, while caring for the environment and the ecological cycle.

1. These numbers are based on an average consumption of 2 000 liters per year.
 2. The prices in this table are showed for comparison purposes only and can change without notice.

An Economical and Ecological Choice.

Our AQUACRISTAL glass filter cartridge is reusable: a first on the market! Return your used cartridge in its packaging. We will take care of recycling and reusing most of the parts so that we can continue to offer the filtration experience with the lowest environmental impact on the market.

All our products are made of sustainable, renewable or recyclable materials. Plastic components have been kept to a minimum and are generally recyclable.

Our packaging materials are carefully selected to minimize their impact on the ecological cycle. In addition, they are mainly made from recycled and recyclable materials.

The AQUAOVO experience advantageously makes it possible to stop the consumption of bottled water, a polluting industry that uses more than 80 billion plastic bottles a year in America alone and whose transportation activities are actively involved in the creation of greenhouse gases.

A single AQUAOVO filtration unit can prevent the purchase, use and disposal of up to 12,000 plastic bottles per year, or nearly 480,000 bottles over your next forty years of active life. Now multiply this number by the thousands of AQUAOVO filtration units that are active on the planet!

Through our choice of materials, our commitment to sustainable development and our policy of reusing filter cartridges, we set new environmental standards to meet the demands of our customers and the needs of our planet.

We adhere unconditionally to a philosophy of social, ethical and environmental commitment.

Natural Beauty, Handmade.

The magnificent, harmonious beauty of the natural world embraces change and variation. Natural beauty arises from synergistic forces — night and day, summer and winter, being and non-being — that unite to form a coherent whole.

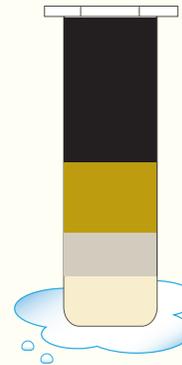

Taking its lead from this great artist, AQUAOVO balances opposing forces to create a genuine, playful experience. We are proud to present a water filter that celebrates the sublimity of nature.

Our production processes are based on the purest artisanal tradition. Natural variations between individual products are part of this organic approach.

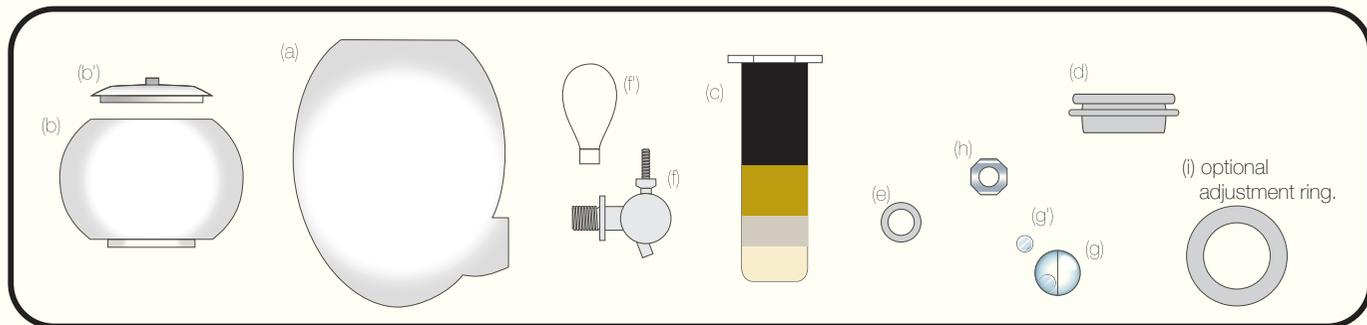

ovopur: first steps

- ① Wash all parts in soapy water. Rinse. Dry.

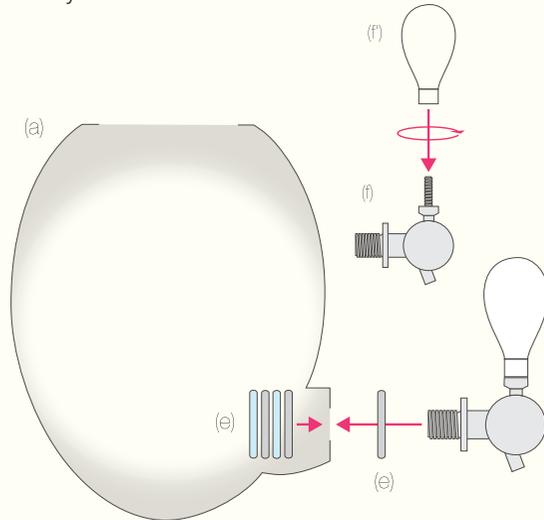

Rinse the filter
in clear water.

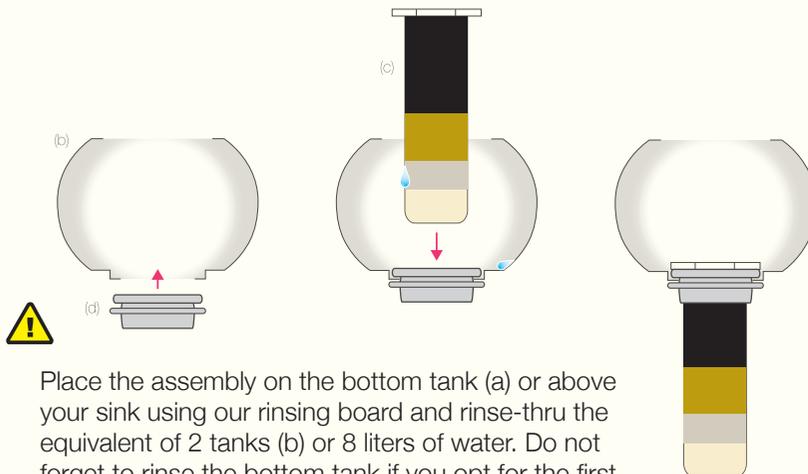

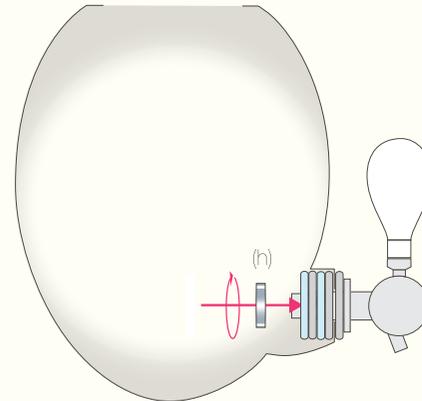

- ② Insert the gasket (d) through the bottom of the top tank opening.
Wet the outside of the cartridge (c) before pushing it down firmly into the gasket by the opening of the top of the upper tank (b) and until the glass ring is in contact with the gasket.

- ③ Screw the handle(f') onto the tap(f). Install the tap taking care to put 1 silicone washer (e) outside of the porcelain wall and then in the same order as they were placed on the tap when you received it.

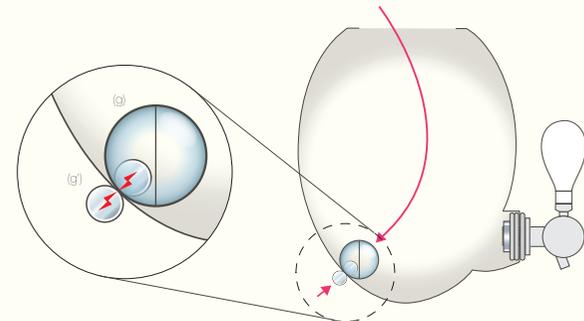

Screw in the inner nut (h) until it presses the stainless steel and silicone gaskets together against the ceramic wall, hold with your hand and perform the last turn clockwise with the tap using your other hand until it firmly holds in place.

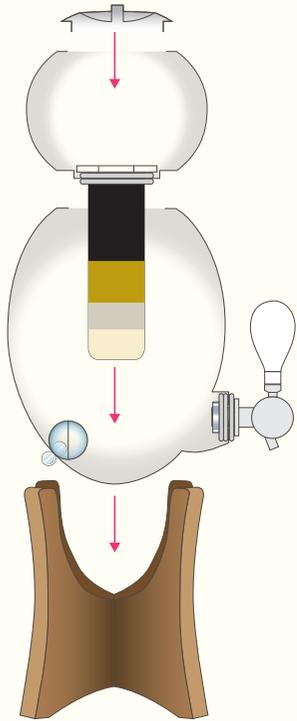

Place the assembly on the bottom tank (a) or above your sink using our rinsing board and rinse-thru the equivalent of 2 tanks (b) or 8 liters of water. Do not forget to rinse the bottom tank if you opt for the first option.

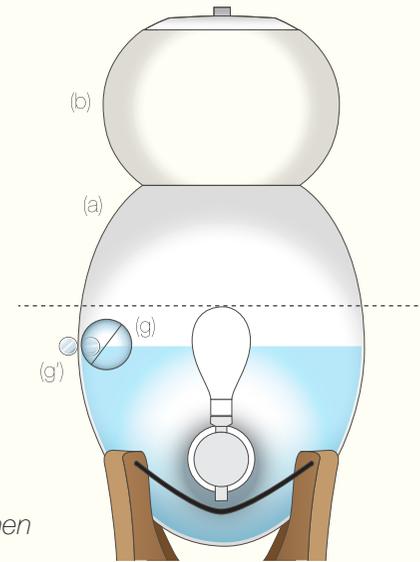

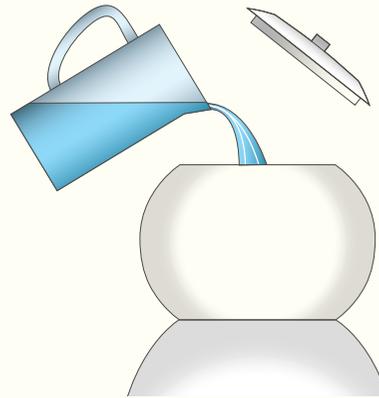

Install the magnetic gauge (g) by firmly holding the curved edge of the magnet (g) against the outer wall while gently pushing the sphere closer to the inner wall of the tank (a). The connection is good when the magnet remains on its edge and rolls against the outer

- ④ Place the large reservoir (a) on its stand. Now place the smaller reservoir (b) with filter in place onto the larger reservoir with the lid on top of it.

- ⑤ You can now start the filtration process of your OVOPUR unit by filling the upper tank using a pitcher. The magnetic disc (g') of the magnetic gauge (g) indicates the water level inside of the tank. The virtual horizontal line drawn by the end top of the handle of the tap indicates the point from which you can reload the filtration tank at full capacity (4L) without fear of overflowing.

Never fill the filtration tank (b) when the main tank (a) is full.

The 60/100 Satisfaction Warranty

At AQUAOVO, we are deeply committed to providing a superior shopping experience to our customers. We include a 60-Day, 100% Satisfaction Guarantee with every filtration product. If for any reason you are not completely satisfied with your purchase, return it within 60 days of receipt and we will gladly replace the product, exchange it for another or refund the purchase price of the item.

ACCIDENTAL BREAKAGE WARRANTY

This warranty covers all porcelain and glass parts of our water fountains OVOPUR and TOWER against accidental breakage under normal conditions of use. If for any reason you accidentally break a piece of glass or porcelain from your device, we will replace it free of charge for a period of two (2) years after delivery.

MANUFACTURER'S WARRANTY

Each product we sell is covered by our 2 years manufacturer's warranty on bases, valves and parts such as silicone gaskets for malfunction or premature degradation in normal use. If you experience any problem during the warranty period, we will be able to provide exchange or repair services if necessary.

AVANTAGE OVO+: automatic filter cartridge replacement

The very high quality and safety of our water filtration experience depends on the regular change of the filter cartridges.

The AQUACRISTAL cartridge must be changed every four months without fail. AQUAOVO therefore offers you automatic cartridge replacement programs that are free, convenient, advantageous and that you can cancel at any time. Subscribe online today.

The AVANTAGE OVO+ program for the annual automated purchase of filter cartridges offers discounts on both cartridges and replacement parts beyond the terms of the original warranty.

All water filters owners who are actively subscribed to one of our AVANTAGE OVO+ Annual Cartridge Replacement Programs are automatically covered by this extended warranty. It covers all parts of your water filter against accidental breakage under normal use after expiration of the initial Manufacturer Warranty. This subscription gives you:

A 20% discount on all your replacement filter cartridges

A 20% discount on all replacement parts purchased after the initial two years coverage of our standard warranty has expired

Please consult the Returns & Warranties page of our website for the full text of our warranties in effect at this time.
